What is a King Tide?

King Tides are the highest predicted high tides of the year. King Tides are technically called “perigean spring tides,” but they occur in both the spring and fall seasons. In fact, the highest tides in southeast Florida occur in the fall, in part because the water is warmer and the seasonal winds drive water levels higher at that time of year.

Where should we expect King Tide flooding?

High water levels caused by King Tides can cause flooding on streets or other areas near waterways and the coast. In addition, areas of the County at low elevation that are not along the intracoastal may also experience flooding during King Tides.

How we can prepare?

Floodwater may contain unseen hazards such as trash and pollutants picked up from the environment, pets, wildlife, broken glass and other debris. Do not enter floodwater and do not allow children to play in floodwater. If you or your children come into contact with floodwater, be sure to clean skin with soap and hot water.

- King Tides can be observed 1.5-2 hours before and after peak times.
- Driving through floodwater is not advisable. Do not drive through floodwater as it may be deeper than it appears, and unseen debris could cause flat tires.
- Do not park your vehicle in low lying areas. Vehicles that have come into contact with floodwater should be checked and cleaned.
- Boaters should be aware that King Tides can cause lower clearance levels than normal under fixed bridges.
- Report King Tides in your neighborhood by sharing photos through the ***Document the Floods*** initiative.
