

GREEN FOOTPRINT

Shivani Vakharia - Pioneer Middle School

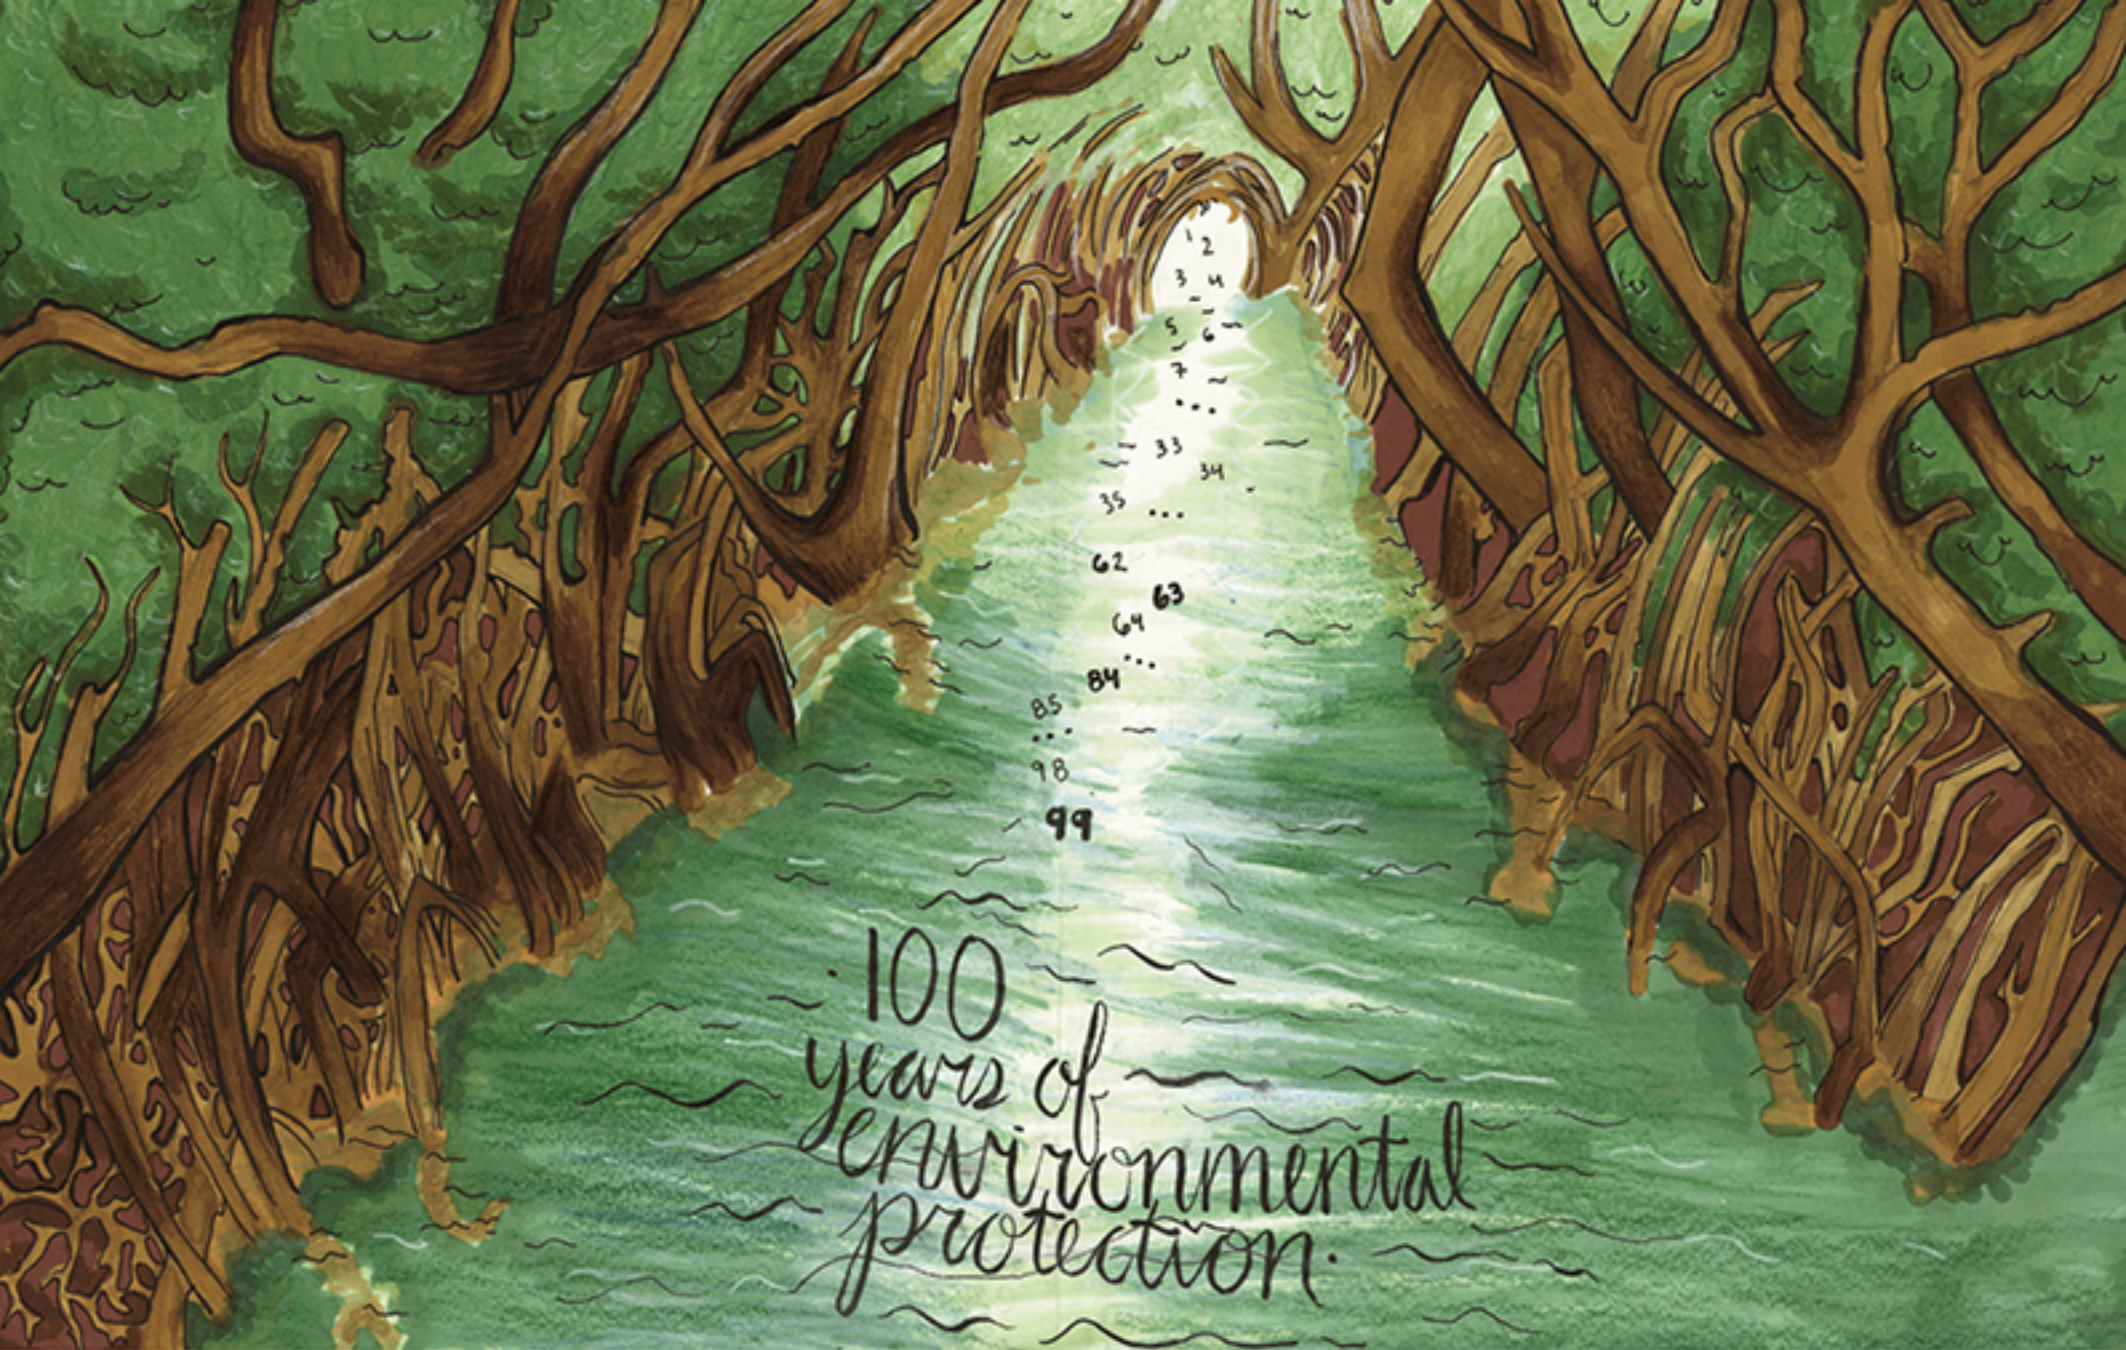

Bike, Walk or Carpool to School

Biking, walking, or carpooling to school is very important. If every single person were to reduce their carbon footprint by changing the way they get to school, the air would be cleaner already. When you sit in the car-rider line (in your personal car), a lot of carbon dioxide is being released into the atmosphere in the form of exhaust. Less cars means less pollution that we have to breathe in.

Theme: 100 Years of Environmental Protection. I picked this theme because environmental protection is extremely important. We depend on the environment for our resources. The environment was here before us so I believe it's important that we preserve it. Broward County has done a wonderful job to help protect it and keep it beautiful.

REDUCE REUSE RECYCLE

THE 3 Rs

When most people think of superheroes, they think of people with awesome names, capes, and superpowers but there are many superheroes around us without all these features. For example, the three R's help save the world from turning into a big mass of pollution. Everyday our world is becoming more polluted, by using the three R's, you can help our world become a better place, or as superheroes say, "save the day!"

Clean Cars of the future

My environmental theme poster, Clean Cars of the Future, presents an idea of cars being environmentally friendly in the future. The flowers being let out from the car give the meaning of environmentally friendly cars. We are in a time period where cars are constantly used as a method of transportation. It would be great to have cars that do not release pollution into the atmosphere. It contributes to climate change and the rise of global temperatures. The design is more conceptual, it makes one start thinking about the actual issue and the possible solutions that come with it. I wanted the poster to be bright and colorful because it draws more attention.

Stop
Polluting
Our Air...

You're
Polluting Our
Lungs...

I chose this theme for my poster because it is an important issue many people look the other way. They know that pollution is everywhere, but they do not understand how much damage it can truly do to the environment and you. Your body is an amazing thing, and only you can maintain your body healthy. Please stand up to this worldwide problem and improve our air and our health.

MAY 2019 Air Awareness Month

Caitlin McCormick
Deerfield Beach High School

The theme I picked was "Make a Positive Change to Prevent Climate Change". This theme represents the idea that although climate change is undeniably happening, there are global efforts to help stop it or slow it down drastically. I picked this theme because I believe that we should spread awareness to as many people as possible and I think that if we as a community strive to stop the decline of the environment, serious changes could occur. This is a critical issue because our environment is currently suffering, and we can't continue to sit back and be amazed over the little change that is occurring and not participate at all. It's so important to actually get out and do something.

JUNE 2019

Imaan Nanji
Westglades Middle School

I chose the 2011 Climate Change Impacts & Solutions around the World theme. I believe climate change is an important issue, because in Florida it is very hot and with climate change it gets hotter and that wouldn't be good. However, climate change can also alter many ecosystems, endangering the flora and fauna of that particular area. Therefore, that is why I chose this environmental theme.

Sustainable Development Goals make Sustainable Schools

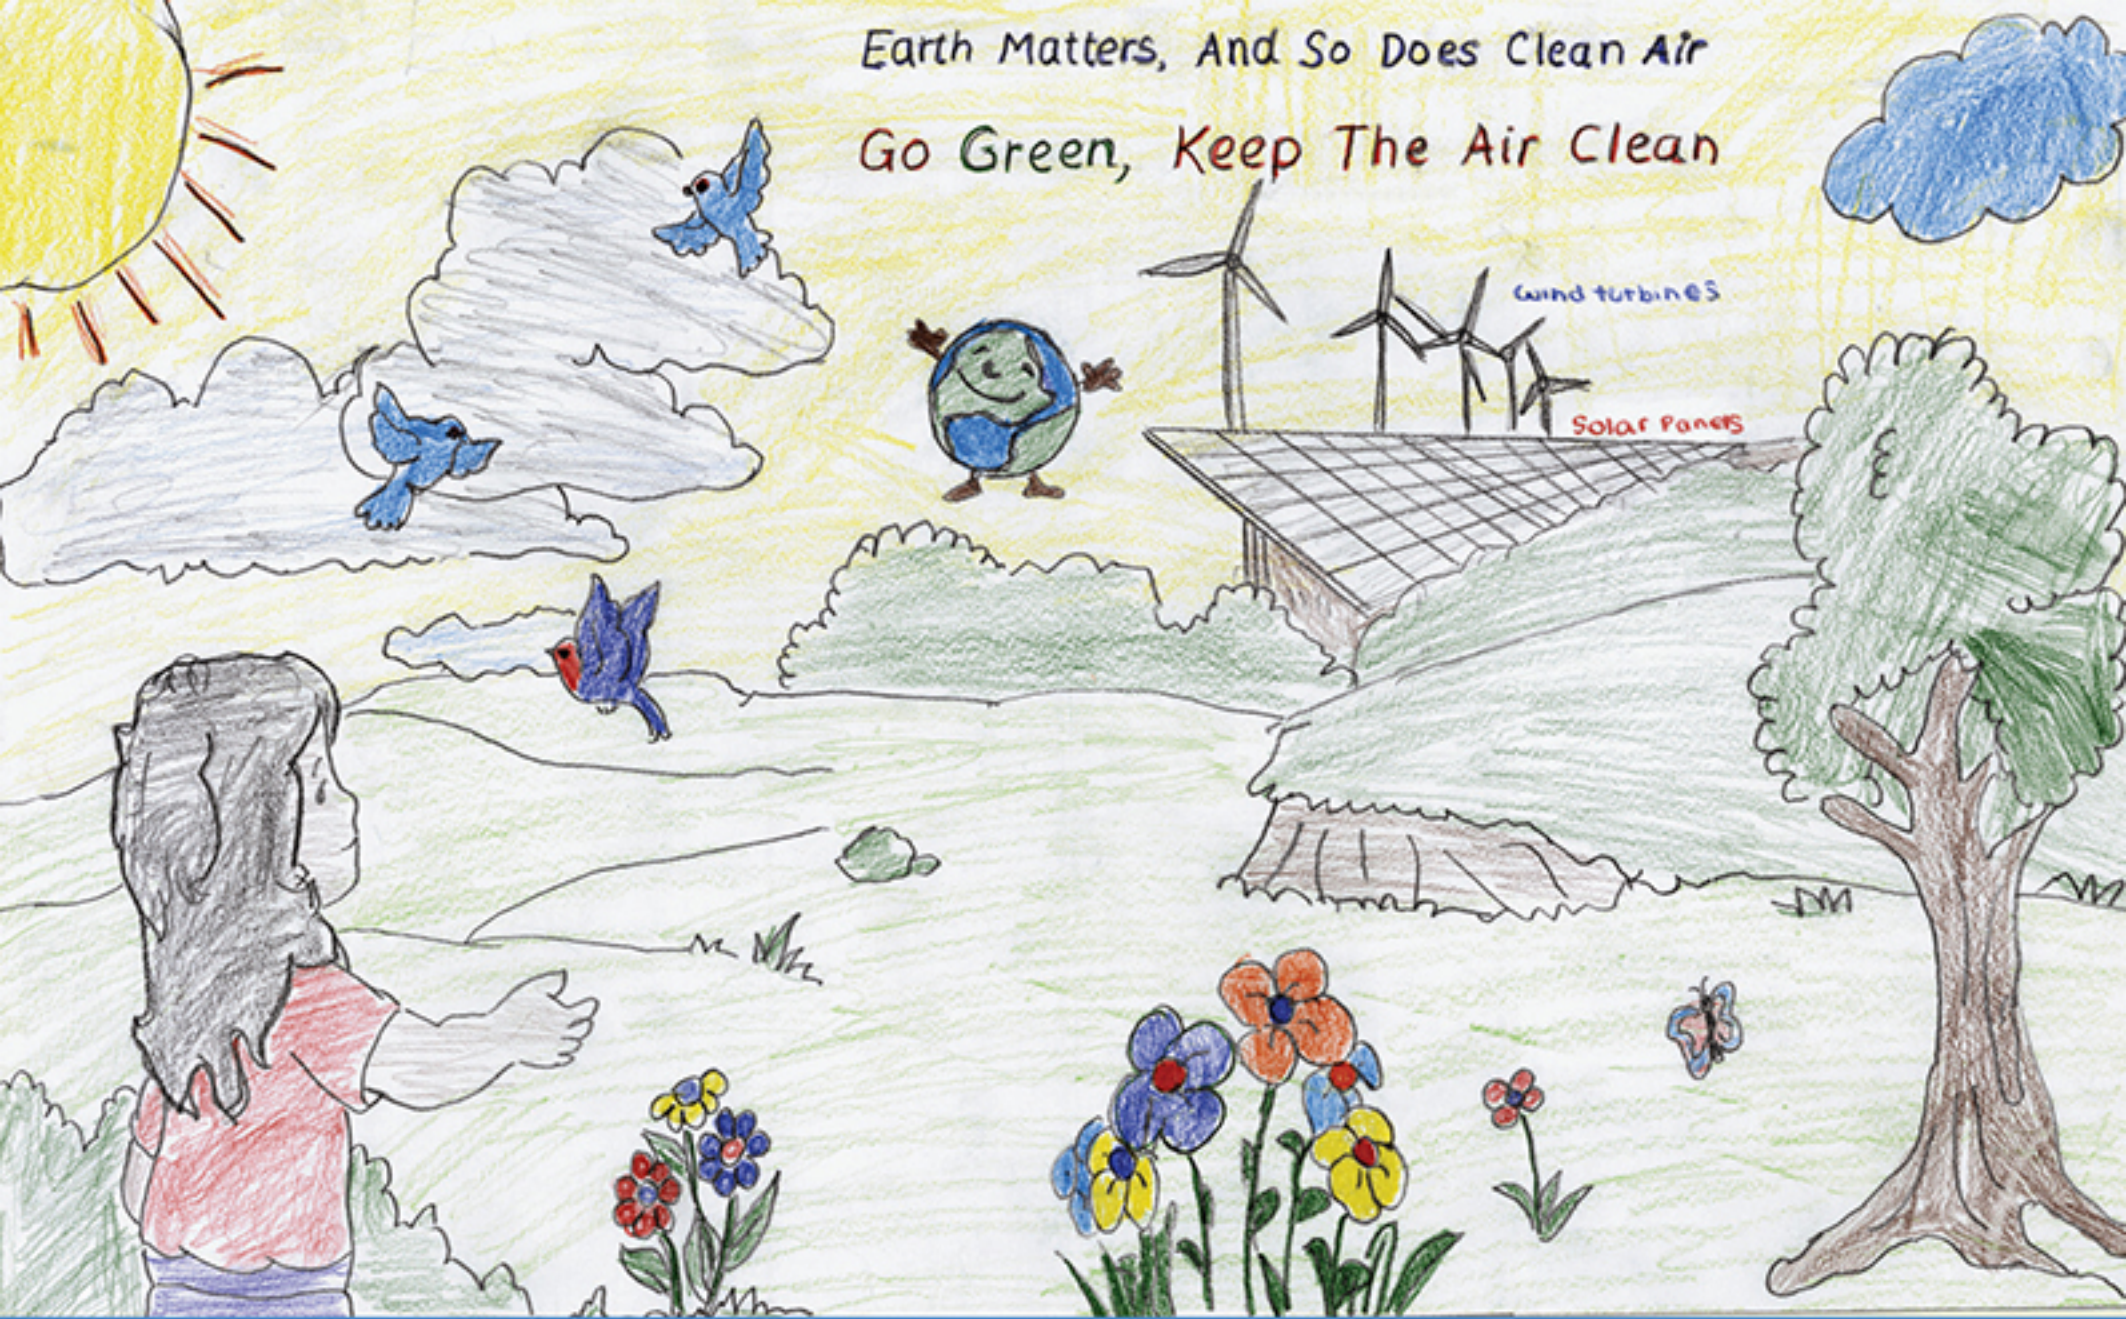

My environmental theme is "Solutions for Sustainable Schools." I picked this theme because if schools are teaching kids to make the world a better place for us all, then we can finally have that perfect, healthy world we have been dreaming about. If schools don't start encouraging kids to start making a change in our world, then beautiful Earth could turn into a waste basket, and our planet could be destroyed!

Earth Matters, And So Does Clean Air
Go Green, Keep The Air Clean

Air pollution is one of the most serious problems in the world. It can cause long-term and short-term health effects. It also causes serious environmental damage. I chose to make a poster showing green energy sources helping to maintain a better Earth. Human activities are the major cause of air pollution. Wind turbines are used to convert wind to electricity. They are thus a better choice than conventional power plants that emit air pollutants and greenhouse gases. Solar power systems derive clean energy from the sun. This helps combat greenhouse gas emissions.

SEPTEMBER 2019

Nikita Nangia
Westglades Middle School

The environmental theme I chose was Green Footprints, which relates to making an impact wherever you go. I chose this because I wanted to illustrate that even a small sign or using wind or solar energy can improve things. This is an important issue because fossil fuels are running out. If we use more natural things or things that use natural energy, we can make the world a cleaner place.

OCTOBER 2019

Taliah de Miranda
Pioneer Middle School

I chose recycling because I think it is a big problem and it is very important. Recycling reduces landfills and saves money. Recycling uses less money because a massive reduction in the amount of waste we send to landfills is required if we are to avoid heavy fines. Recycling reduces landfills because a lot of landfills are filled with cans, bottles, paper and other things that can be recycled. So that is why my theme is recycling.

Healthy Air Healthy You

Did you know!? One
large tree can
Provide Oxygen for
4 adult humans!?

Basically, planting more trees will benefit the Earth. I think it is an essential part of improving the environment. Cleaner air, more space for ecosystems to thrive in. Deforestation happens all across the world, and if we just took the time out of our day to plant one tree and maintain it, our atmosphere would feel fresher and look cleaner. We'd be helping not only ourselves but the people and animals around us. I sincerely hope I can incite change with my plea for more trees. We need to take the upmost care for our home because it's the only one we have.
